SEFSC's Anonymous FTP Server - 199.242.233.67
HummingBird - Exceed - Host Access - FTP

This FTP server is for government use only. This FTP site was developed as a means of providing a secure way for work groups within NOAA to collaborate and share information. The intent of the site is to off-set the use of the mail server for the transfer of large files. This server provides users with an efficient way to share files between dissimilar systems.

The FTP server is not intended for long term storage. Files are placed on this server so others can copy them to their local systems. Once a user has copied the file(s) from the FTP server, they should be removed, providing no one else requires access to them. This server will have all files older than 30 days removed from the system during weekly maintenance activities. Maintenance activities will keep the system operating at peak efficiency and keep hardware costs at a minimum.

This process was developed with the assumption the user has access to and utilizes a TCP/IP protocol suite. These are typically loaded on all NOAA/NMFS systems. When dialing into NOAA/NMFS, you will need to ensure you can use FTP through your Internet Service Provider (ISP). Any FTP program should work. Vista Exceed for Windows and LAN Work Place Pro are the most common within NMFS and both have FTP programs included.

HummingBird - Exceed - Host Access - FTP

Outside users that have FTP capabilities and access to Internet or WAN networking can send and retrieve files using the SEFSC=s Anonymous FTP server, SEFCSUN1 - 199.242.233.67.

The following, are examples of retrieving and placing files to the Anonymous server. The process is identical for any user wanting to place a file on the server or wanting to retrieve a file from the server.

Loading Files to Anonymous (Outgoing) from In-House users.

The recommended policy of the Center is that in-house users at the Center that are placing file on the server, use the Outgoing directory under Pub and notifying their recipients as to that location and file name.
     I.E., **199.242.233.67**/**Pub**/**Outgoing**/file-name

Retrieving Files from Anonymous (Incoming) to In-House users.

The recommended policy of the Center is that outside users wanting to place files on the server, use the Incoming directory under Pub and notifying their recipients as to that location and file name.
     I.E., **199.242.233.67**/**Pub**/**Incoming**/file-name

Log Into Anonymous Server

This example uses HummingBird - Exceed FTP to access the SEFSC Anonymous server, SEFCSUN1

Click in >**Programs**÷
     >**Exceed**=
          >**Host Access**=
   >**FTP**=

An >Open Connection=window will be displayed.

Server Name: **199.242.233.67**
User Name: **anonymous**
Password: (enter your e:mail name:
   **ken.zinniger@noaa.gov**)
Click: **Open**

Upon connecting to the Anonymous Server, two browse windows will be displayed:

    One will display a browse window showing your computer≈s default directory.

    The second will display a browse window showing the Anonymous server≈s default directory.

Anonymous Browser Window

If you are sending from SEFSC:

    Select ≥Pub≈ and the ≥Outgoing≈ drive on the Anonymous server.

If you are receiving to SEFSC from the outside:

    Select ≥Pub≈ and the ≥Incoming≈ drive on the Anonymous server.

Your Computer Browser Window

If you are receiving to SEFSC from the outside:

    Select the drive and directory where the file will be stored on Incoming.

If you are sending from SEFSC:

    Select the drive and directory where the file is located for Outgoing.

Select the file and ≥**drag** and **drop**≈, or ≥**copy** and **paste**≈ from the source to the destination list.

Close all windows and exit.
